BLADEcontrol[®] Rotor Blade Monitoring

Reduce unplanned downtime, increase profitability

Weidmüller 

BLADEcontrol®

Intelligent rotor blade monitoring

Weidmuller's BLADEcontrol® rotor blade monitoring system has been successfully used to increase the yield of wind turbines since 2004.

Condition Monitoring System

With BLADEcontrol®, you can detect performance and structural-related issues such as aerodynamic imbalances, trailing edge cracks, spar web delamination, blade bearing damage and blade tip damage caused by lightning strikes by measuring the vibration response inside the blade.

- Optimized planning of repairs through condition based maintenance
- Detection of critical ice buildup
- Internal and external crack growth monitoring
- Automatic stop and restart minimizes yield loss
- Yield optimization through early detection of rotor blade misalignment
- Minimize unplanned downtime and reduce TCO

WebVis Data Visualization

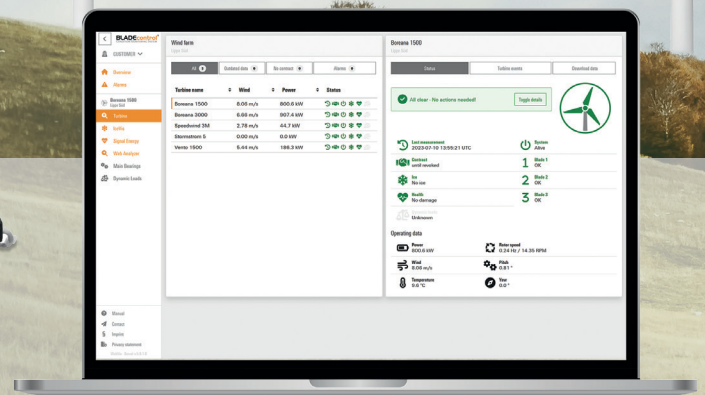

Unlock turbine insights using our web-based visualization and analysis suite, WebVis. The overview dashboard highlights single turbine and fleet-wide diagnostics allowing you to identify anomalous behavior, minimize unplanned downtime and maximize productivity.

- Securely accessible data
- Streamlined UI/UX fast tracks diagnoses
- Real-time FFT analysis
- Multi-variant assessment (power, wind speed, pitch angle, etc.)
- Verification of structural integrity through continuous monitoring of natural frequencies

Custom Monitoring Services

Our team of blade engineers and data scientists integrate with your team to provide technical insight and analysis that keeps your rotor spinning. We create custom algorithms that fit your specific use case to increase yield and provide safe and efficient operation.

- Automated alarms and notifications that flag anomalous behavior
- Customer-specific analyses and insights related to turbine health and performance
- Updates and upgrades for seamless CI/CD
- Continuous 24/7 monitoring and analysis

BLADEcontrol® at a glance

Our expertise - your success

 **Certification**
Ice detection

Why BLADEcontrol®?

- Any turbine/any blade
- Ultra high resolution data
- Easy correlation between vibration response and turbine metadata
- On-prem custom AI/ML models for damage detection and prediction
- 3 times more accurate than acoustic-based platforms
- Continuous vibration monitoring detects most cracks before they are visible via drone inspection

BLADEcontrol®

Condition monitoring expertise

The dashboard provides a comprehensive overview of the wind farm's condition. The main section for Red Rock Valley shows 26 systems, 26 contracts, and an average power of 2534kW. A detailed view for Turbine A01 indicates it is 'All clear - No actions needed!' and shows various operational metrics.

| Turbine name | Wind | Power | Status |
|--------------|-----------|-----------|--------|
| Turbine A01 | 7.48 m/s | 3611.1 kW | 🟢🟢🟢🟢🟢🟢 |
| Turbine A02 | 7.69 m/s | 2543.7 kW | 🟢🟢🟢🟢🟢🟢 |
| Turbine A03 | 6.94 m/s | 2442.3 kW | 🟢🟢🟢🟢🟢🟢 |
| Turbine B01 | 6.00 m/s | 1618.1 kW | 🟢🟢🟢🟢🟢🟢 |
| Turbine B02 | 5.74 m/s | 1118.8 kW | 🟢🟢🟢🟢🟢🟢 |
| Turbine C01 | 10.86 m/s | 4809.0 kW | 🟢🟢🟢🟢🟢🟢 |
| Turbine C02 | 6.22 m/s | 1456.0 kW | 🟢🟢🟢🟢🟢🟢 |
| Turbine C03 | 9.28 m/s | 3387.0 kW | 🟢🟢🟢🟢🟢🟢 |
| Turbine C04 | 8.89 m/s | 3708.2 kW | 🟢🟢🟢🟢🟢🟢 |
| Turbine C05 | 10.39 m/s | 5193.4 kW | 🟢🟢🟢🟢🟢🟢 |
| Turbine D01 | 6.47 m/s | 1450.2 kW | 🟢🟢🟢🟢🟢🟢 |
| Turbine D02 | 8.53 m/s | 3237.0 kW | 🟢🟢🟢🟢🟢🟢 |

Turbine A01 Details:

- Status: All clear - No actions needed!
- Last measurement: 2024-01-12 14:40:31 CET
- Contract: until 2024-12-31
- Ice: No ice
- Health: No damage
- Dynamic loads: No dynamic loads
- System: Alive
- Blade 1: OK
- Blade 2: OK
- Blade 3: OK
- Power: 3611.1 kW
- Wind: 7.48 m/s
- Temperature: 1.6 °C
- Rotor speed: 0.21 Hz / 12.6 RPM
- Pitch: 1.02 °
- Yaw: 323.0 °

Turbine information dashboard

Detailed information is available for each turbine, including blade status, dynamic load indicators and overall system health.

Turbine QuickSwitch™: A panel for Turbine B02 showing database (wmdb_rrv_b02), timezone (Etc/UTC), last measurement (2024-01-12 12:45:52 UTC), WTG Type (Astraeus 5.8-154), and firmware revision (WM-webvis-3.2.14r23 tag (alpha)). It includes a dropdown to switch turbines and buttons for 'Switch turbine but keep settings' and 'Switch turbine'.

Custom Date Selection: A calendar interface for selecting data ranges. It shows 'Last 24 hours', 'Last 7 days', 'Last month', and 'Custom' options. The custom selection is set for 2023-12-12 15:10 to 2024-01-12 15:10.

Automatic Power Curve Visualization: A scatter plot showing power output versus wind speed. The plot includes a 'Filter settings' overlay with options for Rotor speed Sigma, Temperature, Ambient temperature, Wind, Wind Sigma, Yaw, and Yaw Sigma.

Detailed evaluation

Custom user-selected filters enable easy trending of blade and turbine metadata.

BLADEcontrol®

Longitudinal crack detection

Longitudinal Crack - Blade 3 Progression

Vibrational energy in flapwise direction.

Energy spectrum

BLADEcontrol® detects initial crack formation and deterioration in blade 3.

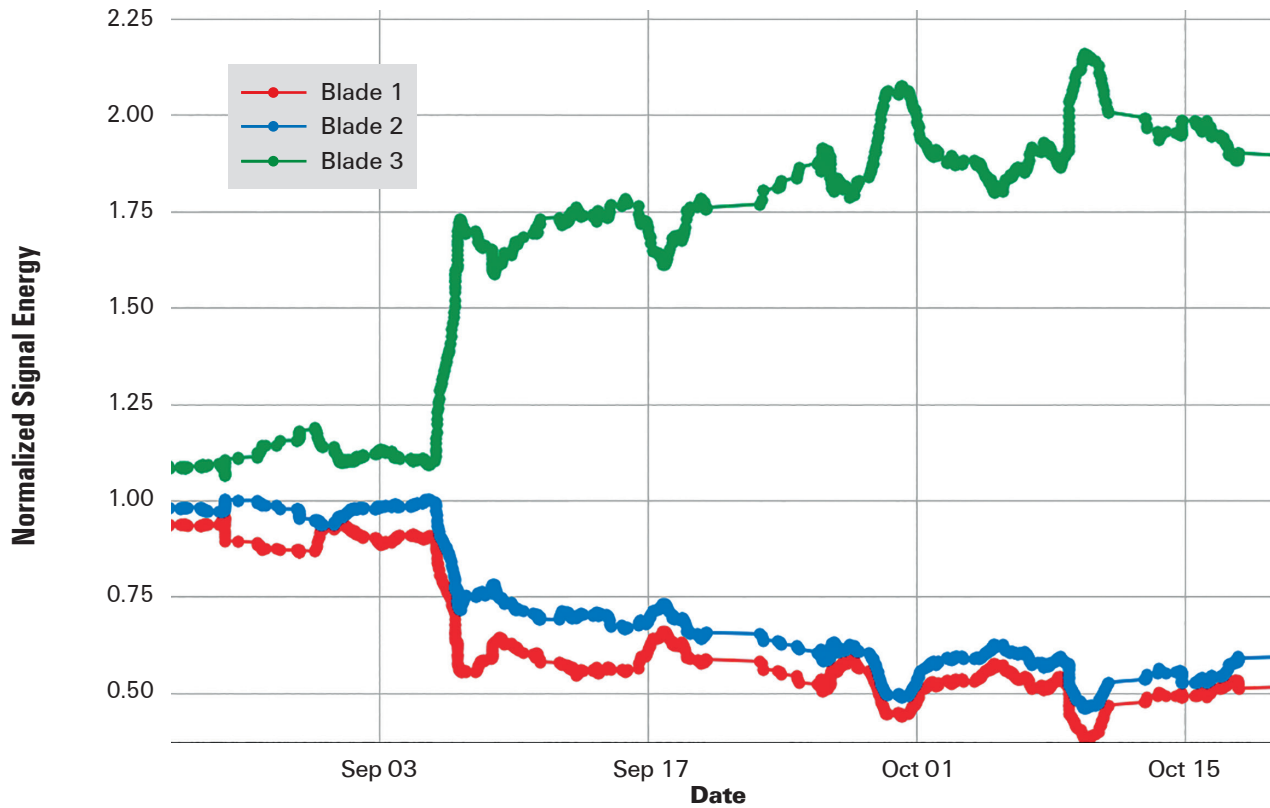

Visual inspection

Initial longitudinal crack grows and branches into chord-wise crack.

Chordwise Crack - Blade 3 Progression

Vibrational energy in edgewise direction.

Critical damage detection

BLADEcontrol® can identify critical damage in rotor blades before catastrophic failure. Notice the increased vibrational response for blade 3 as the crack becomes more severe over time.

Identify damages before failure

Early detection of damage on major components increases turbine energy output and lowers the total lifetime cost of ownership.

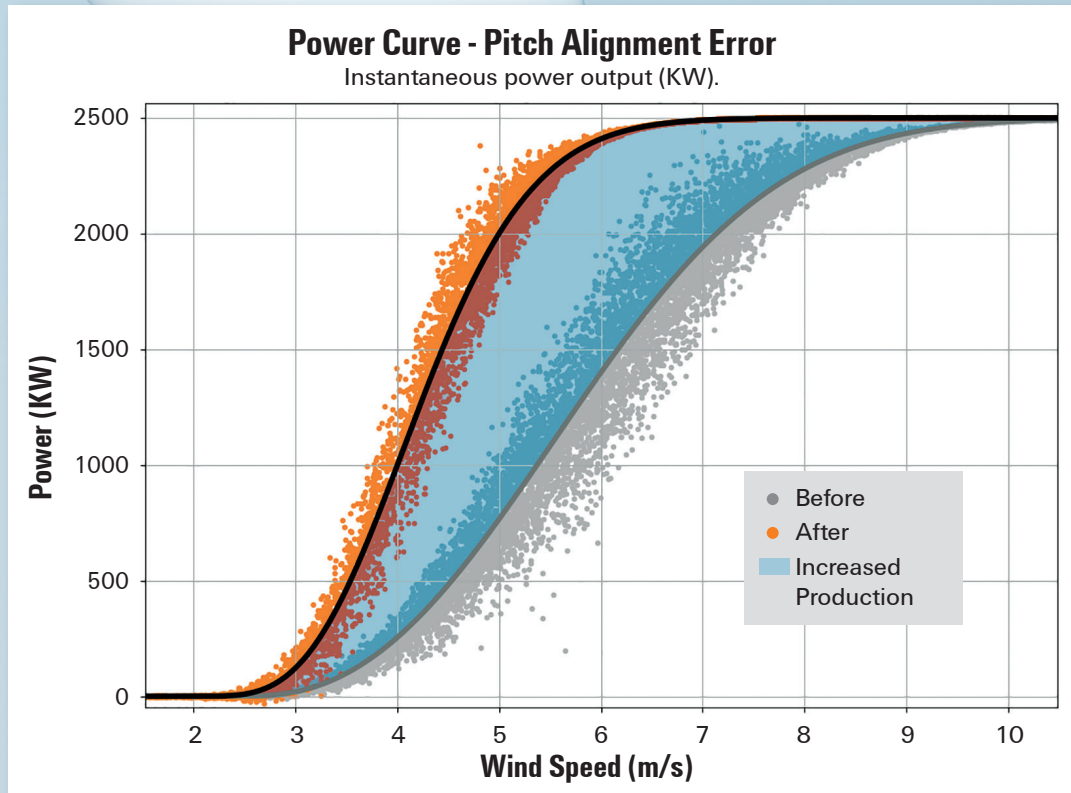

More information on our website:

www.weidmuller.com/bladecontrol

BLADEcontrol®

Performance optimization

Aerodynamic imbalance detection

BLADEcontrol® can help increase your turbine's efficiency by detecting pitch and yaw alignment deviations.

Highly sensitive sensor technology – directly on the rotor blade

BLADEcontrol® continuously records the condition of each individual rotor blade and perceives even minor changes. The risk of expensive repairs is reduced and the economic efficiency of the entire wind turbine increases.

BLADEcontrol® advantages at a glance

- Increased turbine availability
- Extended service life of the rotor blades
- Reduced downtimes
- Ability to plan repairs
- Optimum turbine efficiency
- Optimized operation and extended service life
- Measurable increase in revenue

Weidmuller – Your Partner in Smart Industrial Connectivity

As experienced experts we support our customers and partners around the world with products, solutions and services in the industrial environment of power, signal and data. We are at home in their industries and markets and know the technological challenges of tomorrow. We are therefore continuously developing innovative, sustainable and useful solutions for their individual needs. Together we set standards in Smart Industrial Connectivity.

Have we made you curious? We would be happy to inform you on all innovations in the current version of our WebVis.

Let's discuss your specific project!
Make an appointment with us or send us an e-mail.

We look forward to a dialogue with you!
